

**Trail Map for  
LITTLE DESCHUTES CANYON HIKE**

From the trailhead, the trail follows the flat glacial floor of the canyon west, through an open forest of mature lodgepole pine. At 1.0 miles, the trail climbs up onto an old lateral moraine of the glacier, continuing west with filtered views through the trees.

At 2.0 miles, the trail crosses perennial Burn Creek, and the meadows here can make a good hike destination. For dramatic canyon views and possible elk sightings, one can backtrack down the trail for several hundred yards, then make cross-country treks into the big meadows toward the Little Deschutes.
